JOB PURPOSE AND IMPACT

The Operations Engineer applies engineering techniques to assist in the improvement of manufacturing processes and products. In this role, you will provide technical support, operations experience, continuous improvement and project management skills in a plant support capacity that ensures safe, efficient and low-cost plant operations.

KEY ACCOUNTABILITIES

- You will handle manufacturing equipment and processes designed to be efficient, cost-effective, and to promote quality and reliability.
- Assesses current manufacturing equipment and processes and makes recommendations for improvements.
- Helps to fix and repair equipment. Shows results in reports.
- Helps in conducting tests and measurements throughout stages of production to determine control over such variables as temperature, density, specific gravity, pressure, and viscosity.
- Help process engineer analyze capital expenditures and project designs to find more efficient, cost-effective approaches, which promotes higher quality and reliable outcomes
- You will work under direct supervision and handle basic issues and problems, while referring more complex issues to higher-level staff.
- Other duties as assigned

JOB REQUIREMENTS

MINIMUM QUALIFICATIONS

- Bachelor's Degree in Mechanical, Electronic, Mechatronics or Automation
- Fresh graduated or 1-3 years of related experience

PREFERRED QUALIFICATIONS

- Strong data analysis capabilities including continuous improvement experience or certifications
- Experience with Green Belt, Lean or Six Sigma methodologies
- Project management experience gained through prior experience
- Use of PI (data historian), ACAD (auto CAD), MS Project programs
- Possesses working knowledge of engineering subject matter
