2/ Job title: Product Development Engineer Intern

Ứng tuyển tại link <https://jobs.intel.com/ShowJob/Id/2673184/Product-Development-Engineer-Intern/>

DESCRIPTION:

This position is for an enthusiastic, passionate pre-graduate who wants to gain working experience as a Product Development Engineer (PDE) in Intel's Manufacturing and Product Engineering (MPE).

In this role you'll be expected to participate in global teams to enable Intel's product roadmap.

Responsibilities for this position include the following.

- Performing evaluation and debug of new test program.
- Resolving product/manufacturability issues related to product testing hardware and software.
- Performing data analysis and deploying solutions to improve test coverage, yield, hardware capacity, and other product health indicators.

- Development and debug of support software to support test program validation, data analysis and test debug.

QUALIFICATIONS

The successful candidate will be an undergraduate of Bachelor Degree in Electrical Engineering, Electronic Engineering, Computer Engineering, or Computer Science.

Excellent problem solving, technical, team and communication skills.

Object-oriented programming skill would be an advantage for this position.

BENEFITS

- Internship allowance and meal allowance provided.
- Free fruits, healthy drinks and access to Intel on-site facilities: gym room, sport clubs, social club, chill room...
- An opportunity to gain valuable, hands-on experience in MNCs.
- An inside view of Intel's work environment.
- A chance to develop stronger communication, teamwork, and problem-solving skills.
- The ability to relate and apply knowledge gained to the remainder of schoolwork.
- A chance to make more informed choices about career direction.
